

With the explosion of video conferencing systems and the increase in online classroom and courses across our country, there is a growing need for noise cancellation technology to isolate discussions. Introducing iSoundhub Microphone Array, a range of audio coverage solutions that are optimized for voice and designed for use in small-to-large collaboration meeting rooms or other specialized spaces like classroom, where professional voice clarity is paramount.

The microphones are designed to be discretely mounted on your table or discreetly through your ceiling - providing a range of audio coverage solutions for both integrated video systems and custom video deployments. But beyond just being able to hear each other better, this incredible new technology will make sure your ideas are heard by everyone on your team no matter where they may be located.
